## PROJECT

### Decentrize Voting System on BlockChain

Built a secure, transparent, and tamper-proof voting system using Ethereum blockchain and smart contracts.

- Designed and implemented smart contracts using **Solidity** to handle voter registration, vote casting, and result tallying.
- Utilized **Web3.js** (or **Ethers.js**) to connect a **React-based frontend** with the Ethereum blockchain.
- Deployed contracts on **Ganache / Remix / Rinkeby testnet** and ensured immutability and auditability of voting records.
- Integrated **MetaMask** for user authentication and wallet-based identity.
- Emphasized **decentralization**, **transparency**, and **resistance to fraud** as key system features.
- Explored challenges in scalability and gas optimization for on-chain operations.

## PROFILE SUMMARY

Targeting **Full stack Developer** roles with an organization of high reput with a scope of improving knowledge and further career growth.

- Demonstrated ability to manage and deliver projects **efficiently**, from initial planning and design to final deployment and maintenance.
- Committed to **staying updated** with the **latest industry** trends and technologies, continuously enhancing skills to provide innovative solutions

## ACADEMIC ACHEIVEMENTS

---

- Earned a certification in Full Stack Development, demonstrating proficiency in MERN stack technologies and project management.
- Led the college project, organizing and managing various design projects and events, enhancing the team's creative output and visibility.
